SIGN MAKER DIVISION / GREENSIGN

C&C Marine introducing a new line of GREEN products has implemented a road map for the application of the Major Concepts relevant to the climate sustainability.

C&C Sign Maker is sharing and sustaining the Circular Economy Action Plan for the re-use and recycling of raw materials as well as the reduction of carbon emissions.

C&C introducing a new line of GREEN products has implemented a road map for the application of the major concepts relevant to the climate sustainability. An Environmental Product Self Declaration, validated by an independent third party, is presently at the final approval stage.

Our new GREENSIGN products are produced using recycled raw materials for at least 90% of the finished sign, using electrical power provided 100% from renewable sources and are engineered for the disassembling and re-use by the final customer.

As soon as the validation will be completed, C&C will provide to each GreenSign customer the official declaration with all the environmental information and relevant re-use instructions.
